

What went well?

I believe that I have made this flowchart well enough for me to be able to develop a program based on what my flowchart says. I also feel that my flowchart is suitable and contains all steps outlined in the requirements.

What did I feel confident about?

I am most confident in my use of parallelograms for the input and output of data

What did I find challenging?

I found all the variables challenging, as there are a lot of them and it can be difficult to keep track of them all.

Did I find any steps difficult to plan or represent?

I didn't find anything difficult, but I didn't like how boring the record match part of the program was.

How did I solve problems?

I just tried my hardest to work through them using the information in my head.

Did I ask for help?

Had to google what shape is best suited for variables, just did it as in/out because it made the most sense.

Does my flowchart meet the scenario?

I believe that my flowchart does meet the scenario and includes everything that is needed of it.

Have I included all the key steps?

Yes, I feel that I have included every step that is needed.

What could I do to improve?

I could make my flowchart more efficient and maybe cleaner.

Could I make my flowchart clearer?

Probably, but I'm not sure how and what I have feels sufficient enough.
